

# random

---

`random(min: number, max: number): number`

The factory function `random` accepts two parameters.

- `min`: The smallest, allowed number to be generated.
- `max`: The greatest, allowed number to be generated.
- `returns` a float point number that is in the given range.

## Example

```
const value = random(12.92, 29.81);  
// => 18.83215
```
