use

`use(mdl: Buildable): Buildable<T>`

Creates a buildable model from the given object. Accepts one parameter.

- `mdl`: The model template-object to be gets converted into a `Buildable`.
- `returns` a `Buildable` from with the given template-object.

Example

```
const $Person = model({
  name: oneOf(['Sara', 'Peter']),
});

const $Company = model({
  employees: use($Person, quantity(2)),
});

const company = build($Company);
// => {
//   employees: [
//     { name: 'Sara' },
//     { name: 'Peter' },
//   ],
// }
```
